

March 7, 2008

Dear Brenna,

Econergy has reviewed Green Mountain Energy Company's online CO₂ calculator hosted at www.BeGreenNow.com and concluded that the calculator follows the methodologies and emissions factors consistent with the EPA Climate Leaders Greenhouse Gas Inventory Guidance. The EPA Climate Leaders methodology is based on the WRI GHG Protocol and as a result, the www.BeGreenNow.com calculator is also consistent with WRI GHG standards and methodologies.

Econergy specifically tested CO₂ calculations for Electricity Use, Vehicle Travel, Air Travel and Natural Gas emissions and agrees with the assertion that the calculator represents an accurate way to calculate CO₂ emissions for these areas.

Sincerely,

Eric Christensen
Senior Engineer
